

## SUMMARY OF CLEANING & FORMULA APPLICATIONS IN SALES DATASET

The data set provides a comprehensive view of sales transactions, designed to support analysis and visualization in Power BI.

### ❖ Content Overview

- **Order Details:** Includes order IDs, product names, categories, quantities, unit prices, and total amounts.
- **Customer Information:** Captures customer IDs, regions, and demographics for segmentation.
- **Sales Performance:** Tracks revenue, profit margins, and discounts applied.
- **Time Dimension:** Dates of orders, shipping times, and fiscal periods for trend analysis.
- **Geographical Data:** Regional and country-level sales distribution.

### ❖ Key Insights Enabled in Power BI Dashboard

- **Revenue Trends:** Monthly and quarterly sales growth patterns.
- **Top Products & Categories:** Identification of high-performing items.
- **Regional Performance:** Comparison of sales across different markets.
- **Customer Segmentation:** Analysis of customer groups contributing most to revenue.
- **Profitability Analysis:** Highlighting areas with higher margins vs. discounts.

### ❖ Business Value

The dataset supports decision-making by enabling interactive dashboards in Power BI. It helps stakeholders monitor KPIs, identify growth opportunities, and optimize sales strategies.
